Subject: Application for the position of Data Analyst at Latina S.A.M.

Dear Sir/Madam

It is with great enthusiasm that I am sending you my application for the position of Data Analyst at Latina S.A.M., a company whose dynamic focus on data and automation particularly inspires me.

I'm currently studying Artificial Intelligence at the University of Nice Sophia Antipolis, and I'm very interested in the role Latina S.A.M. plays in the processing of top-of-the-range alcoholic beverages. Your company, which has been based in Monaco since 1942, represents an exceptional opportunity for me to put my skills to good use and broaden my knowledge of international trade.
The tasks described in the offer correspond perfectly to my professional aspirations. My academic background and technical skills in R, Python and SQL enable me to approach data collection, entry and evaluation with rigour and precision, as well as supporting the ongoing development of data warehousing capabilities.

My in-depth understanding of databases and data governance, gained during my studies and academic projects, positions me as an ideal candidate for identifying, designing and documenting internal process improvements, including data infrastructure design and the automation of manual processes.

I am also keen to contribute to the increased use of PowerBI within the business, whilst supporting compliance with regulatory requirements for business relationships. My intrinsic motivation, my enthusiasm and my ability to measure the impact of my work on growth make me the ideal candidate for this position.

I'm convinced that my profile matches Latina S.A.M.'s expectations, and I'm ready to put my skills to work for your team. I would be delighted to discuss this application further in an interview or telephone call.

Yours sincerely

Marius Casamian
